

PROSWEETS 2009

*Get together with the
confectionery industry*
at Prosweets 2009

Prosweets 2009 will take place in Cologne, Germany from 1st to 4th February. This time, the event will take place entirely in parallel with the International Sweets & Biscuits Fair (ISM)

The **Netzsch** CHOCOEASY is designed for the production all types of high quality chocolate starting from the raw materials. Users have a high degree of flexibility and can use their own influence on the chocolate formulation and quality, says the company.

A range of machines allows production of batches from 25 to 6,000kg within an enclosed, space-saving module. Thanks to the modular construction of the plant future expansion of the system is easily accomplished.

The unit also has a low energy consumption, cooling water use and space requirements (each with up to 40% savings over traditional systems). Shorter process times for a batch by grinding and liquid conching at the same time allow more productivity from a single machine. This may enable a savings of up to 5% cocoa butter, claims the company.
